

MEDPAQ™ by TRADEPAQ™ Corporation

Powerful Document Generation, Messaging & Delivery e-business Engine

Overview

When it comes to medical records, patient information, and business office documents, **MEDPAQ** is just what the doctor ordered: the Web-based system provides the most comprehensive e-business document generation and delivery solution in the market today. With **MEDPAQ**, hospitals, clinics, HMOs, Integrated Delivery Networks (IDNs), home care agencies, and other health-care organizations now have a prescription to manage medical records more efficiently and cost effectively.

MEDPAQ links employees, patients, administrators, and suppliers to information in a real-time, online and secure environment, creating a healthier business climate. For example, as a single source solution for business and patient care documents, **MEDPAQ** makes it easier to find records that are needed through a central archive. And best of all, it allows users to customize the information in a format that meets their specific business needs.

How it works

MEDPAQ is fully customizable and eliminates expensive pre-printed forms. You can create barcodes for patient and record identification, eliminating the need for costly embossers or other specialized printing equipment. And all this is done without making programming modifications to your health information system (HIS) and departmental applications. **MEDPAQ** features multi-lingual capabilities that allow you to generate documents in the language preferred by the patient. It supports laser printing and graphics options like company logos, faxing, e-mail, EDI, XML, re-prints, and flexible printer routing.

Through TRADEPAQ's patented rules-based technology, **MEDPAQ** incorporates

user-defined rules to print exactly the type of documents required for the unique patient or user requirements of each transaction. Rules will determine how documents are transmitted—via printer, fax, e-mail, or other electronic transmissions, such as XML and EDI. **MEDPAQ** also includes patented data requestor technology to permit last-minute manual editing or entry of special document information not in the HIS system.

MEDPAQ comes with a complete online help system, including field-by-field descriptions and step-by-step instructions. And when you need it, TRADEPAQ also offers complete 24-hour help desk support with implementation and support services located worldwide, including Buenos Aires, Amsterdam, London, Singapore, Helsinki, and New York City.

Applications

- Prints pre-certification documents and billing forms according to individual payer requirements. Patient Datamailers/Statements; UBs

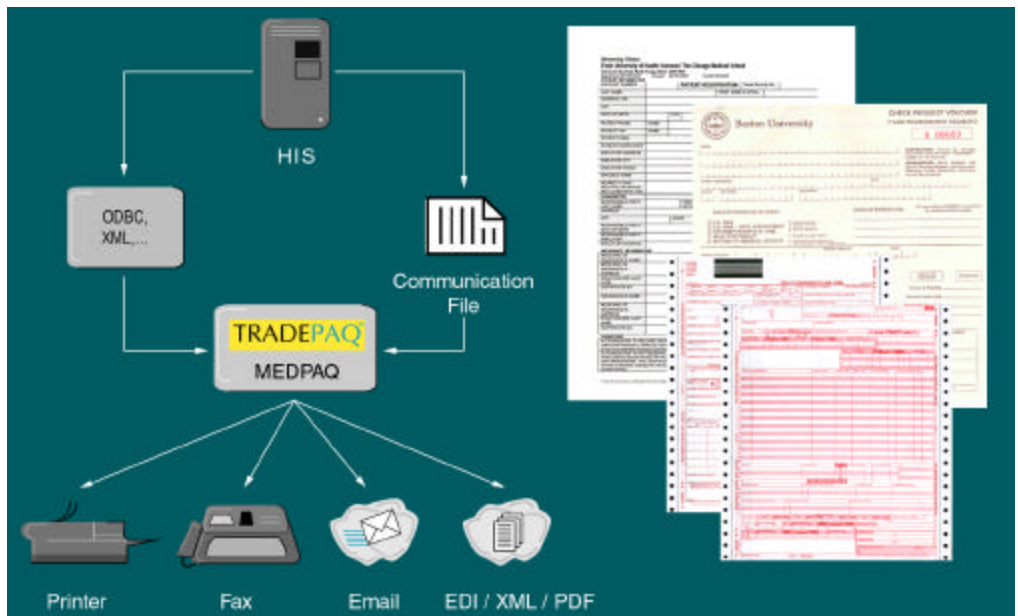

and HCFAs; Accounts Payable Checks; Detail Bills; Payroll Checks; and Barcode Charges.

- Prints personalized patient packets based on admission diagnosis and treatment plans at appropriate nursing stations including: Progress Notes; Flow Sheets; Physician Orders; Diet Menus; Fluid Balance Sheets.
- Assists Medical Records Human Resources, and Pharmacy departments by facilitating their operations through enhanced and efficient printing: Purchase Orders; Barcode Labels; Checks; Requisitions; W2s; Ancillary Department Forms; and Transportation Requests.

Benefits

- Eliminates form costs as all documents and graphics print on plain paper.
- Prevents losses due to excess forms inventory and obsolescence.

[More...](#)

- Increases productivity by making it easy to find the records you need.
- Provides ease of use—IT staffs and users can create easily their own documents by the elegant tools and methodology built into the software.
- Improves quality by producing legible forms, eliminating errors and omissions.
- Eliminates photocopying by automatically printing multiple copies of the right form at the locations required.
- Enhances patient care with documents in the patients' own language.
- No custom programming! Merge patient and business data to print anywhere on your documents.
- Standardizes the usage and presentation of business and patient information on documents by including barcode labels for patient and chart identification.
- Better security by printing checks electronically to provide your business office improved control.
- Prevents risk of unexpected penalties and fines as correct documentation avoids unauthorized or improper usage of restricted and regulated materials.

Functions & Features

- Single source solution for all Patient Care and Business documents.
- **MEDPAQ** makes it easy to find and extract data from your health care applications, and then place it in electronic forms. You can design attractive, readable forms quickly, print them on plain paper on a variety of standard laser and thermal printers, or send them electronically via fax and e-mail.
- Laser Check Printing including the ability to print checks complete with standard information such as check number, payment data, signatures, logos, bank ID, the MICR line, statement stub and audit trail.
- Intelligent Document routing can print, fax, e-mail, or send via XML and/or Electronic Data Interchange. Printing can be to any printer with a Windows driver on a LAN or WAN.
- Rules-based conditional printing: patented software enables selection of documents based on real-time

document data. The right documents are printed in the appropriate location when needed. For example, if a patient is under a specific payer program, **MEDPAQ** will print the correct insurance forms. There is no limit to the amount of rules (or payees, for example) that the system can handle.

- Data Requestors: patented software enables manual entry of data that is not available in the health care information system.
- No additional programming required. Its easy to use customization features allow you to reformat the layout of your application data, conditionally change forms, modify font style and size, delete or alter data from one page to the next, and sort forms so they print in the order you want, where you want.
- Multi-lingual capabilities and support: ability to handle all Windows-supported languages including Cyrillic scripts, Double Byte scripts (Kanji, Mandarin), and Latin-based languages. TRADEPAQ can also implement solutions with native language speakers in each language.
- Provides users with choices in the type of data acquisition used for document generation. Data can be obtained either through the business system spool files, API files, ODBC mapping, Data Requestors, or any combination.
- Automatic, semi-automatic, or manual document printing. Documents may be set up to print automatically (no user intervention,) semi-automatically (user review before release,) and manually (user data entry before release.)
- Worldwide implementation capabilities and support. Implementation and service locations include Buenos Aires, Amsterdam, London, Singapore, Helsinki, and New York.

Technology Highlights

- Integrates with leading HIS applications.
- Provides full scalability as your patient care and business needs grow

- Incorporates our patented rules-based functionality addressing the unique last-minute trade requirements of health care organizations.
- Platform independent/database independent.
- Available for the Windows NT, UNIX, IBM AS/400, and Novell operating environments.

TRADEPAQ Corporation delivers a complete suite of e-business infrastructure solutions for health care organizations that allows you immediate entry into e-business. Contact your TRADEPAQ account representative for further information.

TRADPAQ suite of e-business infrastructure solutions:
